### **DETAILED ACTION**

1. This action is responsive to the following communications: Amendment filed on 10/24/2008.

**This action is made final.**

2. Claims 1 – 4, 8, and 9 are pending in the case. Claim 1 is the independent claim. Claim 1 is the amended claim. Claims 5 – 7 and 10 – 20 have been cancelled. Claims 1 – 4, 8, and 9 have been rejected by the Examiner.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 – 4, 8, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Xia et al. (US 6,252,594).

**As per independent claim 1**, Xia discloses *a method for indicating that a content page is scrollable comprising:*

- *displaying at least a portion of a content page within a display area of a graphical user interface (GUI), wherein said displayed portion of said content page occupies all of said display area (column 5, lines 4 – 7);*

Art Unit: 2179

- *determining whether the displayed content page is scrollable in at least one direction (column 5, lines 9 – 10);*
- *responsive to said determination, displaying at least one flyover within said display area to indicate said at least one direction that said displayed content page is scrollable, wherein said at least one displayed flyover is a GUI object independent of said displayed content page and not part of the displayed content, wherein said at least one displayed flyover overlaps at least one among text content and image content shown in said displayed portion of said content page, and wherein said at least one displayed flyover is configured to occlude the at least one among text content and image content of the overlapped portion of said displayed portion of said content page (column 5, lines 4 – 40); and*
- *detecting an occurrence of a flyover-close event, and, responsive to said detection, discontinuing the display of at least one flyover (column 5, lines 21 – 25).*

**As per claim 2**, and taking into account the rejection of claim 1, Xia further discloses that *said displaying at least one flyover step further comprises the step of: responsive to determining that said displayed content page is scrollable in a vertical direction, displaying a vertical flyover (column 4, lines 56 – 65).*

**As per claim 3**, and taking into account the rejection of claim 1, Xia further discloses that *said displaying at least one flyover step further comprises the step of: responsive to*

Art Unit: 2179

*determining that said displayed content page is scrollable in a horizontal direction, displaying a horizontal flyover (column 4, lines 56 – 65).*

**As per claim 4**, and taking into account the rejection of claim 1, Xia further discloses *scrolling said displayed content page in said at least one scrollable direction, wherein a position of said at least one flyover remains fixed during said scrolling step (column 7, line 51 – column 8, line 24)*, wherein it the fact that a “user is... allowed to dock... scrolling related GUI components” sufficiently corresponds to an ability of ensuring that a position of such GUI components serving as flyovers remain fixed during scrolling.

**As per claim 8**, and taking into account the rejection of claim 1, Xia further discloses that *at least one among an appearance, a position, and a behavior of said at least one flyover is customized using a configuration editor (column 5, line 65 – column 6, line 19 and column 7, lines 51 – 61).*

**As per claims 9**, and taking into account the rejection of claim 1, Xia further discloses that *said at least one flyover is implemented on an operating system level as a generic GUI object (column 4, lines 40 – 53 and column 9, lines 36 – 48).*
